

JongHoon Jung is a Professor in Department of Physics at Inha University. He received his Ph.D. from Seoul National University in Department of Physics in 2000. After working as a postdoctoral researcher at Seoul National University and Spin superstructure ERATO project in Japan Science and Technology, he joined the Department of Physics, Inha University in 2004.

His recent research interest is focused on piezoelectric/pyroelectric/triboelectric nanogenerators in ferroelectric nano materials, and functional devices in flexible transition metal oxide films.

Now, he takes the role of principal investigator for “contact electrification basic research laboratory”, funded by National Research Foundation (NRF) of Korea.
